

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter presents the conclusion of the research finding and suggestion of the present research.

5.1. CONCLUSION

Based on the research and data analyses, the researcher can conclude that:

1. Project based learning is more effective to applied in speaking activity than conventional technique. The mean result of student's speaking performance in experiment class which taught by project based learning was 82,5 while the control class was 66,87. The score test of student's speaking performance in experiment class was higher than score test of student's speaking performance in control class.

The result of independent t-test score between experiment class and control class was significant different because the result showed a. Sig. $0.000 < \alpha \ 0.05$. It means there is significant different between experiment class which taught by project based learning and control class which taught by conventional technique in speaking activity.

2. The result of questionnaire was 81 % students were motivated in learning teaching activity during project based learning and 19 % was not interesting in speaking activity. It means that the students have the very good respond during project based learning applied in speaking activity. From the result, the researcher concluded that the project based learning is one of interesting technique to apply in speaking activity.

5.1. SUGGESTION

In this part, the researcher would to give suggestion for the teacher that the teacher should apply the project based learning in speaking activity and also the others interesting technique in order to get the active students in speaking class.

The researcher also gives suggestion for the further researcher to develop the project based learning in different activity and of course by the different material.
