

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter talked about the conclusion of the result and also suggestion toward the study.

5.1 Conclusion

The result of post test in this study has been shown in the previous chapter. The significant result was 0,000. It could be connected to the hypotheses. It means that the null hypothesis can not be accepted because the result was lower than standard significance (0.05%). In other words, the alternative hypothesis was accepted. Therefore, the researcher concluded that there was significant influence after implementing paraphrasing strategy toward students' reading comprehension in the 8th grade of Nurul Huda junior high school. Thus, it could be alternative strategy which could be applied in the classroom for improving students' comprehension while they were reading a text.

5.2 Suggestion

After analyzing the data, researcher hopes that her research will be useful and helpful for:

a. Teacher

Researcher has implemented paraphrasing strategy. Hopefully, the teacher will apply this strategy for improving students' reading comprehension. In order to the students will be interested in learning

English because the teacher has a new method while they are having English lesson. So, it will attract them for keeping their spirit in learning English.

b. Students

While implementing this strategy, students were interested in having English lesson. They thought that reading was not as boring as they imagine. So, they would be able to keep their spirit though researcher has finished her research. In order to they are able to improve their English skill.

c. Further researcher

This study was expected to give information to the next researcher who wants to have the similar study, especially, the study which is related to paraphrase strategy. In other words, this study will be a useful reference.
