

CHAPTER V

CONCLUSION & RECOMMENDATION

5.1 Conclusion

Based on the process of developing this reading test, the researcher will summarize the important point related to the following research study.

Based on the feedback from the teachers of SMPN 1 Cerme Gresik, there is just one point which should be revised. The allocation time which considered too long is changed into 60 minutes.

After pre-testing the test, there are some revision for multiple choice items. It causes of the item facility of those items are too high. It means that those questions are easy to answer correctly by the students. Those are the questions of number 4,7, and 13.

While for content validity analysis, the reading test which has been developed is valid. Moreover, based on the reliability analysis, it is found that reliability coefficient for multiple choice is 0,88. While reliability coefficient for essay test is 0,98

5.2 Recommendation

From the result above, the researcher gives some recommendations to use this reading test not only or the seventh grade students of SMP 1 Negeri Cerme but also for other teachers in the same level who want to train their students reading comprehension.

The researcher suggests other researchers to use this study as their reference in developing reading test. Other researcher can develop any kind of reading test for other level. Also, the researcher suggests the other researcher to develop their reading test into CALL application or MALL application.
