

# **CHAPTER V**

## **CONCLUSION AND SUGGESTION**

This chapter present conclusion and suggestions. The conclusion is based on the analyzing of the data mentioned and discussion from previous study. while suggestion is also made based on the result found in the research, they must be in the line with the conclusion. It also presents the suggestion about reading literacy that happens in autism spectrum disorder with high function. It will give advice or what futher actions should be done based on finding.

### **5.1 Conclusion**

The conclusion based on the finding that researcher showed that both have the ability to solve different problems. Both subjects have the ability to understand, identify and also explain again about the text and problems in the problem. However, on the side of explanation between first students who have good mathematical abilities are more permanent and clearer in their delivery. In the second student he still has the ability to explain which is still unclear and difficulty in delivering so that researchers often ask again and provoke the student to speak.

Both are able to find problems in the text and also important information that they must solve in different ways. But on the ability to predict problems to visualisazing abilities there were significant differences because they were influenced by various levels of intelligence which showed the English language skills of ASD students with high intelligence and low intelligence.

Then in the characteristics of their behavior, they also have differences between students with high intelligence and low intelligence of ASD students. to the High Intelligence students he still showed that if he was still able to control himself in the world of his imagination while low intelligence he was still with his thoughts sometimes laughing and also turning right and left if there was a sound.

## **5.2 Suggestion**

In further research it can be applied to students who have an age below them. Then you can do reading literacy at a higher level so that analyzing their cognitive is more and more valuable than the knowledge given to the next researcher. It also need to used PISA reading with high level more than this level.
