

CHAPTER V

CONCLUSION AND RECOMMENDATION

In this chapter, the researcher presents the conclusion of all the results of this study and recommendation dealing with this research. In this section, the researcher tries to answer the problem of this research and then conclude the final result. Besides, the researcher gives the suggestion on the future research that will develop this research.

5.1 Conclusion

Based on the process of developing this English material, the researcher will summarize the important point related to the following research study.

The design of this research is Research and Development. The object of this research is the XI grade students of the second semester of SMK Muhammadiyah 1 Gresik that located in Bungah, Gresik. They are 17 students which consist of 12 males and 5 females. The researcher developed English material with consist of three chapters that using Content Based Instruction (CBI) approach and more exercise for better practice to industrial electronic engineering major. This approach and exercise means that the module emphasized on the practice rather than theory because based on the students' need the result shown that the student wants to improve their skill in reading, which is emphasized more on exercise to get a better practice.

Based on the findings of the students need, the researcher then divided the module into three chapters. First chapter covered the information about robot work together with people. The second chapter covered the information about

how to be a good maintenance, and the last chapter covered the information about good job. In the step of expert validation, the researcher got the suggestion to correct some grammatical errors in the module. Meanwhile, in try out step, the researcher did not have any suggestion from the participants to correct some errors or revise any parts in the module. Therefore, the result of the students' perception toward the English material by using CBI approach the text book is interesting and ease to be understood by them.

To conclude those findings, the researcher could say it is good because the students like the product but better for them that they needed to have understanding of the theory first then they could practice.

5.2 Recommendation

From the result of this research, the researcher gives recommendation that the English material is able to be applied for students on XI grade for industrial electronic engineering of SMK Muhammadiyah 1 Gresik. This English material can help the teacher to teach English more specific as the students' need in this major. Also, this material more easy and simple to be understood for the students because this material have more vocabularies.

The researcher suggests to the next researchers to use this study as their references. That is why, this research can inspire the next researchers to develop the English material for industrial electronic engineering major into another approach, so the next researchers can develop with another way to teach English, another subject, and exercise.
