

CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter, the writer wrote the Conclusion and Suggestion related to this study.

5.1. Conclusion

Based on the research result and analysis result that was done, the writer can take conclusion that Educative Media can give significant impact about English ability for children. A child who got education game, her/his English ability to be better with level 7, 6079 than a child who didn't get educative media has level 5,9057.

Use game, a child is easier to memorize, stimulate curiosity's children and they do not pressure with same concept that teacher thought, so that a children are happy and have a spirit compete with their self

When pre-test was done the level result of English ability of control group higher with level 5,6071 than experiment group with level 5,3686, however, after experiment group gave educative media, their English ability has significant higher than control group with $t=2,507$ and $p=0,019$

5.2. Suggestion

1. First, educative media is better introduced by children since early time, and the type of media is adapted with discipline knowledge, because it have many advantages and one of them is can sharpened the child brain or the child cognition.

2. Second, educative media can applied in the some discipline knowledge, not only in English but also can applied in science, mathematic and other, this is can to be alternative media for some teachers in give materiel.

As theoretical if the researcher does similar research, is suggested by them to increase the quantity and scope of population. Thus, the sample that they got bigger and various, with a hope their research result can support the bask of theory had.
