

CHAPTER V

CONCLUSION AND SUGGESTION

As a conclusion of this study, the researcher would like to give readers an overall view of what the researcher has discussed in previous chapter. In addition, the researcher would like to give some suggestion that maybe useful for English teachers and for the further researchers when they want to use the suggested technique in teaching English Positive Degree for the fifth grade students of Elementary School.

5.1 CONCLUSION

As has been stated in the previous chapter that the purpose of this research is to know the effectiveness of using pictures in teaching positive degree at Elementary School, So that why the researcher tested the hypothesis to know the result of statistical-t (t- hitung). If the result of statistical-t was higher than t-table, the alternative hypothesis (H1) was accepted. From the calculation the researcher found that statistical-t was 5,7 and t-table was 2,021, so it can be concluded that the alternative hypothesis was accepted and it means that there is effectiveness of using pictures in teaching positive degree. Moreover, from the statistic average of Experimental Group ($\bar{X}_1 = 11,3$) while the statistic average of Control Group ($\bar{X}_2 = 0,7$). So, the researcher can get conclusion that students whose teacher uses pictures will have better positive degree mastery than the student whose teacher does not use pictures.

5.2 SUGGESTION

In applying the technique of this study, the researcher suggests the English teachers to use pictures in teaching-learning process (in this case; grammar, especially positive degree) because its effectiveness was proved. Furthermore, the English teachers should use pictures whose levels of difficulties are appropriate to the students' level. Moreover, the pictures used should be interesting, simple and easy to be done and it should be related to the materials. Beside, the English teachers should be creative to use pictures which come from many sources for positive degree mastery. Finally, the researcher hoped that the suggestion will be helpful to overcome the English teachers to apply the suggest technique in innovating their way of teaching, so that the aims of teaching- learning could be achieved.
