Abstraksi

Penelitian ini bertujuan untuk melakukan pengujian implementasi perbaikan secara berkelanjutan yaitu melalui pengaruh *Sensing*, *Seizing*, dan *Reconfiguring* terhadap *Continuous Improvement Growth* di Universitas Muhammadiyah Gresik. Dengan menggunakan 26 sampel yang merupakan dekan dan kepala program studi yang ada di Universitas Muhammadiyah Gresik. Pengujian menggunakan *inner models* pada *wardPLS 5.0*. Hasil menunjukkan bahwa *sensing* berpengaruh positif terhadap *Continuous Improvement Growth*, *seizing* tidak berpengaruh positif terhadap *Continuous Improvement Growth*, dan *Reconfiguring* tidak berpengaruh positif terhadap *Continuous Improvement Growth*.

Kata Kunci : *Sensing*, *Seizing*, *Reconfiguring* dan *Continuous Improvement Growth*

Abstract

This study aims to test the implementation of continuous improvement, namely the influence of Sensing, Seizing, and Reconfiguring on Continuous Improvement Growth at Muhammadiyah Gresik University. By using 26 samples which are deans and heads of study programs. Testing uses inner models in wardPLS 5.0. The results show that sensing has a positive effect on Continuous Improvement Growth, seizing does not have a positive effect on Continuous Improvement Growth, and Reconfiguring does not have a positive effect on Continuous Improvement Growth

Keywords: Sensing, Seizing, Reconfiguring and Continuous Improvement Growth
